

The Future of Automated Product Data is Now.

Manual product data intake is the hidden cost inside every quote, every catalog update, and every customer relationship in the electronics supply chain. There is a better way.

The Reality Most Teams are Living With:

Manage the file. Clean it. Map the fields. Import it. Repeat.

For most distributors and manufacturers, this is the product data process. Manual, time-consuming, error-prone, and quietly responsible for misquotes, delayed updates, frustrated customers, and burned-out teams. *It feels unavoidable. It isn't.*

What Orbweaver Does:

- Automate product data from intake to your system. No manual work required.
- One platform connecting you, your suppliers, and every file that flows into your system.
- Standardized, accurate data delivered in real time, empowering your team to focus on what actually matters.

What Changes When You Automate:

ROLE	WHAT BECOMES POSSIBLE
Manufacturer	Data flows to every distributor partner in real time. Updates happen once, everywhere.
Distributor	Catalogs are always current. Quotes are accurate. Customer conversations are easier.
Executive	Operational drag shrinks. Headcount goes toward growth, not maintenance.
Sales Rep	More time selling. Fewer corrections. Stronger relationships built on reliable information.

24%

of rep time absorbed by data cleanup rather than selling.

3x

more quote errors when catalogs are manually maintained.

72%

of distributors report data integrity issues creates customer friction.
